A Corrigendum on

Hidden in Plain Sight: High Tacrolimus Metabolism Doubles Kidney Transplant Failure and Drives Infection Related Mortality

by Süsal C, Döhler B, Demir E, Ibrahim W and Askar M (2025). *Transpl. Int.* 38:15207. doi: 10.3389/ti.2025.15207

In the published article, there was an error in the article title. Instead of “Hidden in Plain Sight: Low Tacrolimus Metabolism Doubles Kidney Transplant Failure and Drives Infection Related Mortality”, it should be “Hidden in Plain Sight: High Tacrolimus Metabolism Doubles Kidney Transplant Failure and Drives Infection Related Mortality”.

The authors apologize for this error and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.

Hidden in Plain Sight: High Tacrolimus Metabolism Doubles Kidney Transplant Failure and Drives Infection Related Mortality

21,865
Kidney transplants

Largest study to date

2000–2019

25.2% with low CDR
Concentration-Dose-Ratio

Low CDR predicts poor outcomes HR up to **2.80**

Infection-related mortality **+63%**

On higher risk for low CDR:

- Female recipient
- Black people
- Young (<50 years)
- CYP3A5*1A (8-fold)

Diltiazem
co-medication

Steroid tapering

Improved long-term
graft outcome
